

Enhancing quality of care by communicating health needs collaboratively

eScreening is a customizable data platform which allows Veterans to submit health information remotely from their personal devices directly to the medical record. Customizable and standardized forms can complete clinical reminders, create unsigned editable text notes, generate health factors, and increase the quality of Veterans time with their provider by reducing time spent on mandatory documentation.

Key Features

- Allows clinicians to **focus on direct patient care**
- Satisfies **clinical reminders**
- Generates **health factors**
- Creates an unsigned editable **text note in CPRS**
- Pushes data to MHA for **measurement-based care**
- Complete **mandatory documentation** outside of face-to-face time
- Features **customizable forms**, allowing tailored data collection for clinical needs

How it Works

Clinicians determine which measures to collect from Veterans including clinical reminders, standardized screenings, and measurement-based care. eScreening measures are fully customizable based on a program's specific clinical needs. Patients receive an email to complete electronic screenings on their personal device outside the VA network. Once the screenings have been completed, eScreening generates a text note in their chart, satisfies clinical reminders, populates alerts, creates health factors, and pushes data to MHA for measurement-based care.

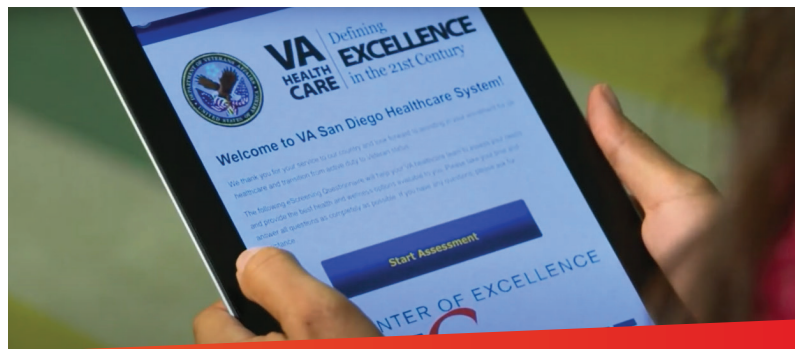

Why Use Technology-Based Screening?

- Time-savings in mandatory documentation, improved quality of clinical face-to-face time, improved data capture, broader reach of early detection, and easy integration with electronic records
- Patients find eScreening easy to use regardless of their technological experience
- May feel safer for patients than using paper questionnaires

eScreening at Your Facility

eScreening is available to your facility at no cost with customized training and implementation support. For more information, visit <https://dvagov.sharepoint.com/sites/vhaescreening>.

To discuss adopting eScreening at your facility, contact Jack Gault at John.Gault@va.gov.

eScreening Satisfaction

92% of Veterans agree eScreening is an intuitive and easy to use tool

90% of Veterans are satisfied or very satisfied with the eScreening experience

89% of Veterans find eScreening instructions helpful and easy to follow
