

# Questionnaire for Emergency Medicine Providers and Leadership on the Inclusion of Rehab Therapy Services in Emergency Departments

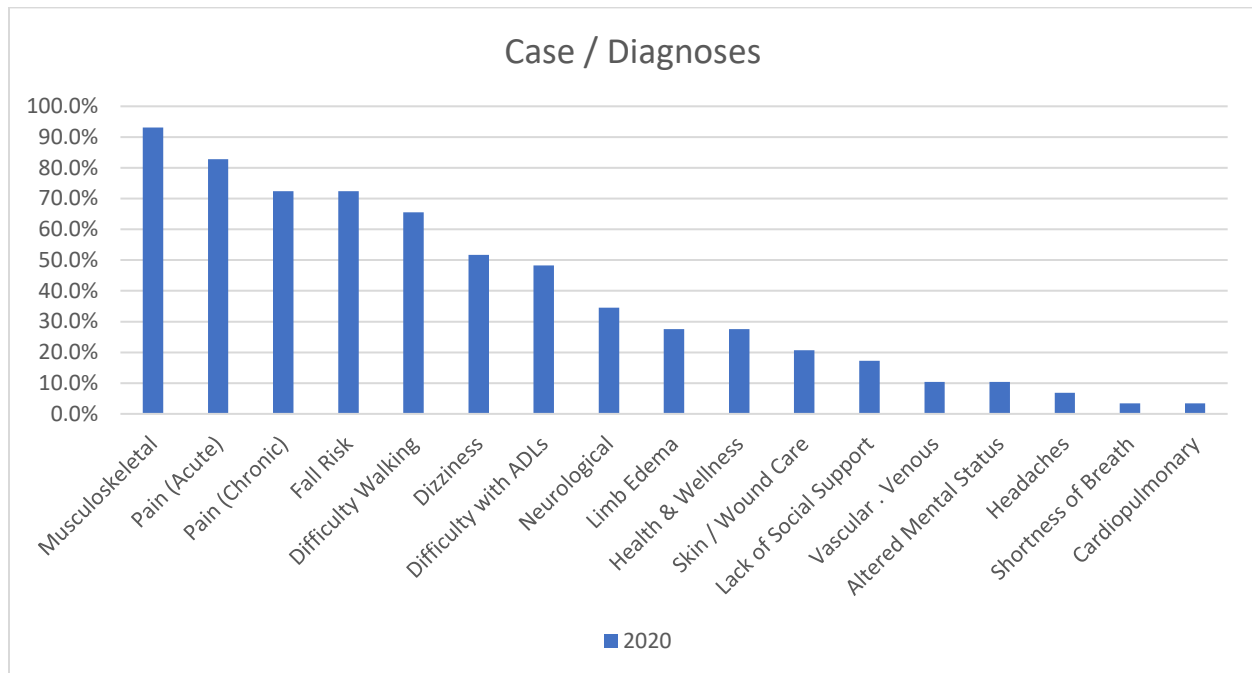

29 respondents completed the survey from 6 facilities between February and March 2020

Survey will be repeated in 2021 in February for all facilities with inclusion of PT or OT in ED care beginning January 2021 or earlier.

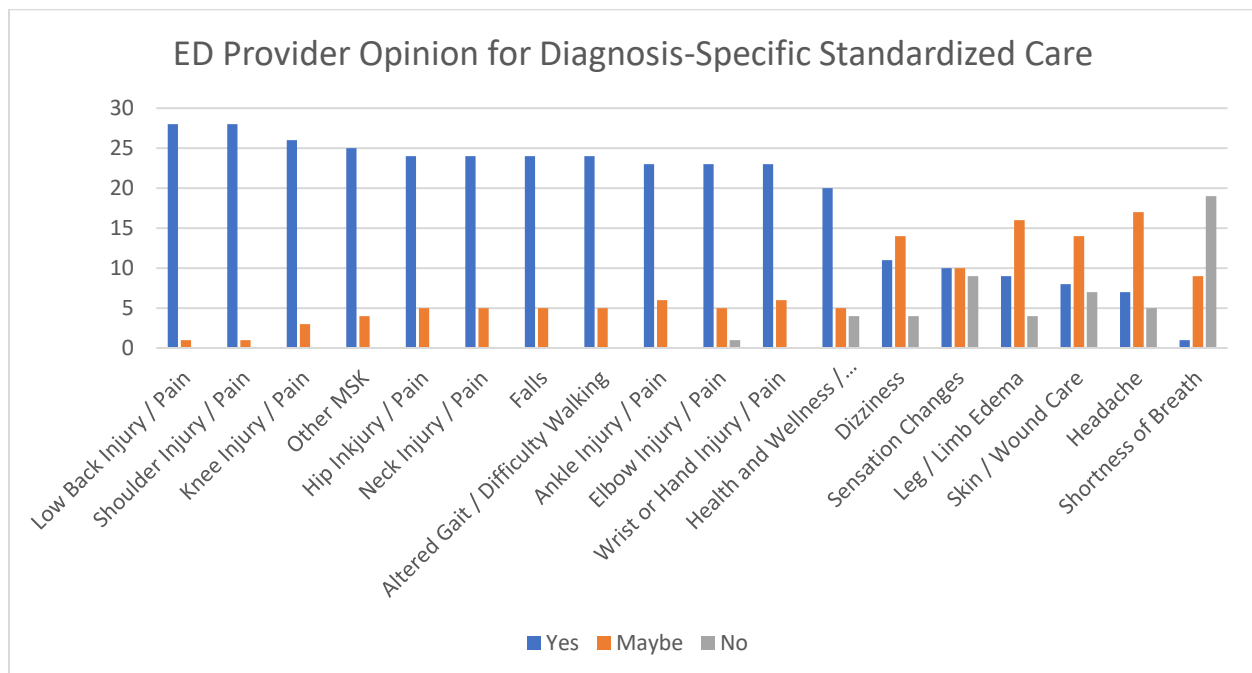

27 of 29 of these providers had some history of patient referral to Physical Therapy or Occupational Therapy

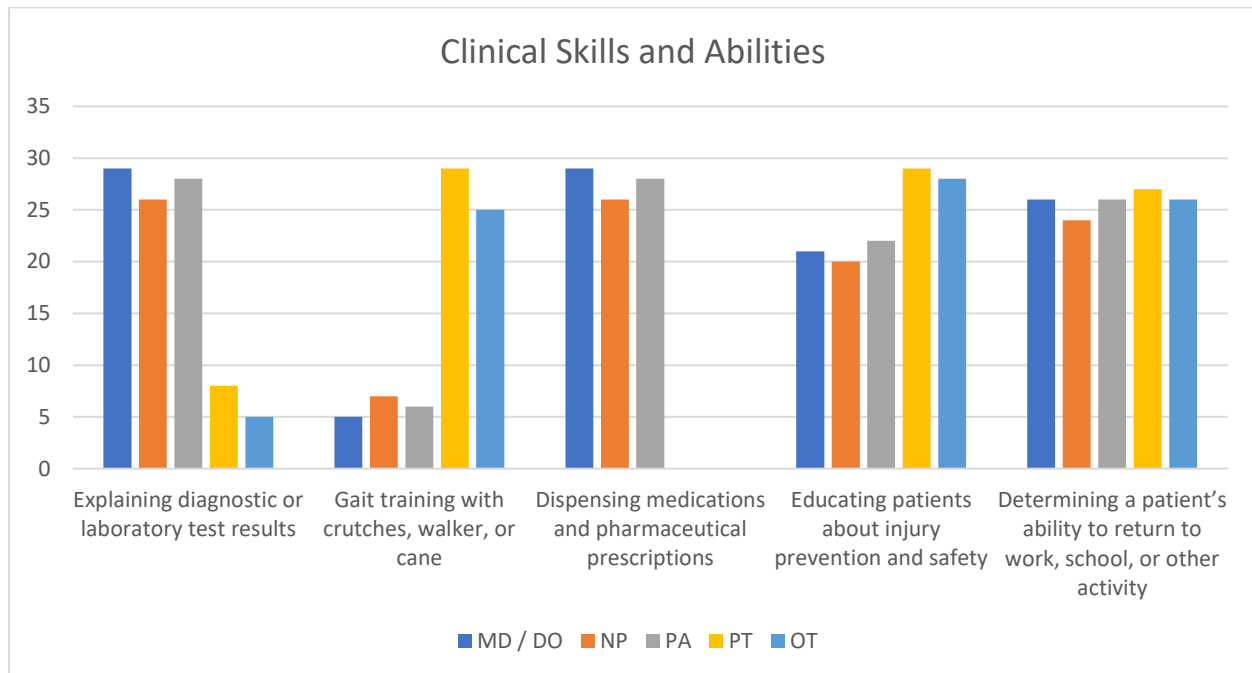

What types of patients / cases could rehab therapy services assist with, including assessment or treatment? (percentage of providers, N=29)

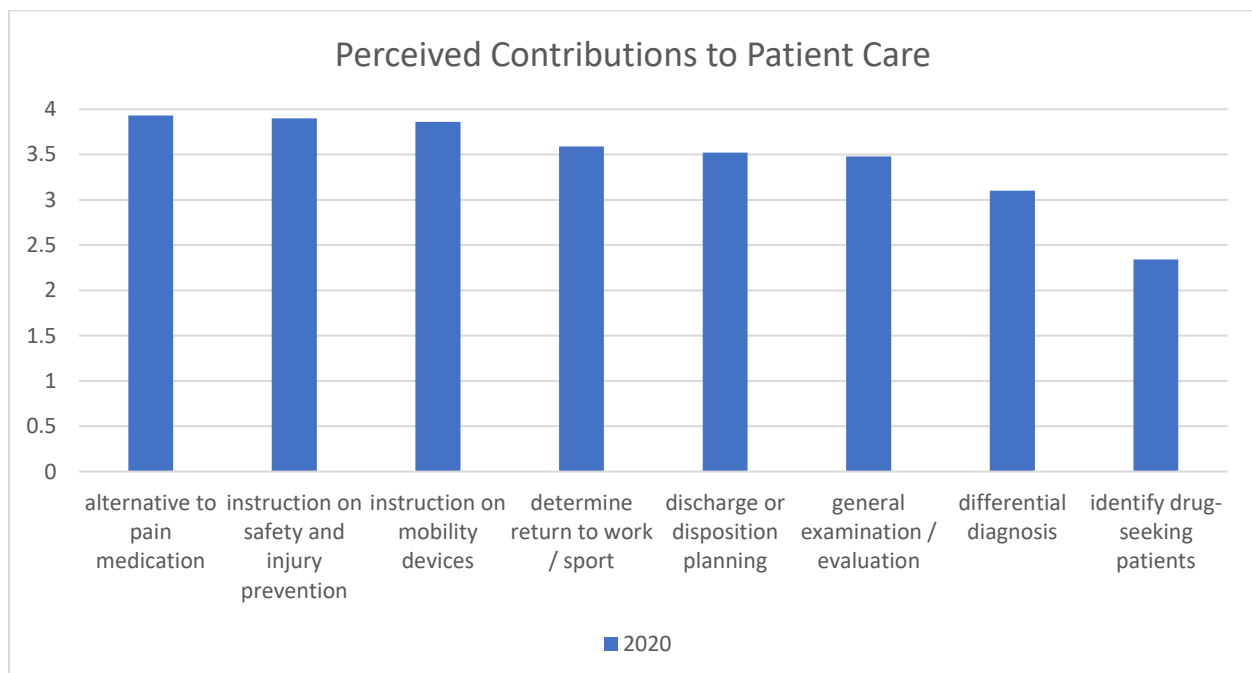

Please indicate whether you would support a standardized inclusion of rehab therapy in the ED for patients presenting with any of the following

Please indicate your opinion of which practitioner(s) are well- suited to provide the following services to patients in the ED.

Please indicate your opinion of what rehab therapy services contribute to patient care within the ED.  
(4 = adds a great deal / necessary component of care; 0 = does not add anything to care)

Consider ALL patients you have cared for in the ED, AND whose care has included rehab therapy services. Have you been satisfied with outcomes? Why, or Why not?

Are you concerned about any of the following as a result of adding rehab therapy services to ED care?
